

DIGITAL LITERACY PROJECT REPORT

Name: Machhi Dimpal

Registration Number: 25BAI10718

Branch: CSE (AI ML)

Year: 1st year (2nd semester)

Course Code: CSE0001 – Digital Literacy

Date: 31-03-2026

1. Introduction

Digital literacy is an important skill that helps students use technology effectively, safely, and responsibly. This project was designed to improve our understanding of digital tools, online communication, problem-solving, and cyber safety. Through five different tasks, I explored various aspects such as creating visual content, using online platforms, coding, writing professional emails, and understanding cybercrime. Each task was practical and helped me apply my knowledge in real-life situations. The project also focused on building awareness about maintaining a professional online presence and following safe internet practices. Overall, this project provided a complete learning experience that enhanced both my technical and communication skills.

2. Task 1 (Canva Presentation)

In Task 1, I created a digital literacy awareness infographic using Canva. The aim was to design a single visual slide that explains important concepts in a simple and attractive way. My infographic covered five key areas: what digital literacy is, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. I used icons, headings, and short descriptions to make the content easy to understand.

Canva made the design process smooth because of its ready-made templates and design elements. I focused on maintaining clarity and balance so that the slide does not look overcrowded. This task helped me understand how visual communication can make information more engaging.

One challenge I faced was fitting all the information into one page while keeping it neat. However, I found it interesting to combine creativity with knowledge. This task improved my design skills and helped me better understand the importance of digital literacy.

3. Task 2 (Portfolio)

In Task 2, I created and set up my digital portfolio across platforms like GitHub, LinkedIn, and Kaggle. The main purpose of this task was to build a professional online presence and showcase my skills, projects, and achievements in an organized way.

On GitHub, I uploaded my project files and learned how to manage repositories, add README files, and maintain proper

documentation. On LinkedIn, I created my profile with details such as education, skills, and interests, which helps in building a professional identity and connecting with others. On Kaggle, I explored datasets and understood how it can be used for learning data science and participating in competitions.

This task helped me understand the importance of having an online portfolio in today's digital world. In the future, I plan to regularly update these platforms with new projects and achievements to improve my profile. Overall, this task enhanced my understanding of personal branding and digital presence.

4. Task 3 (Code + Google form)

In Task 3, I worked on both a coding problem using Python on HackerRank and created a Google Form. The coding part helped me improve my logical thinking and programming skills. I practiced using conditional statements and understood how to solve problems step by step. Initially, I faced some errors in my code, but after reviewing the logic carefully, I was able to correct them and pass all test cases.

Along with coding, I also created a Google Form as part of this task. The form was designed to collect responses in a structured way, which helped me understand how data can be gathered and organized digitally. I learned how to add different types of questions such as multiple choice and short answers.

This task was very useful as it combined technical skills with practical application. It improved my problem-solving ability as well

as my understanding of digital tools used for data collection. Overall, it helped me gain confidence in both coding and using online platforms effectively.

5.Task 4 (Email + do's and don'ts)

In Task 4, I worked on a professional communication scenario where I wrote a formal email and also listed the do's and don'ts of email etiquette. The objective of this task was to understand how to communicate effectively in a formal environment.

While writing the email, I followed a proper structure including a clear subject line, polite greeting, well-organized body, and a professional closing. In addition, I identified important do's such as being clear and concise, using polite language, and checking grammar before sending. I also included don'ts like avoiding informal language, not using unclear subject lines, and not sending incomplete information.

This task helped me understand the importance of professional communication in academic and work settings. It improved my ability to write clear and respectful emails and made me more aware of common mistakes to avoid.

6. Task 5 (Cybercrime + Safety)

In Task 5, I created a cybercrime awareness case study based on cyberbullying. In this case study, I described a realistic situation

where a student faced online harassment and explained its negative impact on mental health and confidence. This helped me understand how serious and common such issues are in the digital world.

I also included important safety measures such as not sharing personal information, blocking and reporting abusive users, and using privacy settings on social media. These steps are essential to stay safe online and prevent cybercrime.

As a reflection, I was surprised by how easily such incidents can occur and affect individuals. One important habit I will change is being more careful and responsible while interacting online. This task increased my awareness and encouraged me to promote a safer and more respectful digital environment.

7. Conclusion

This project was a valuable learning experience that helped me develop essential digital literacy skills. I learned how to use digital tools, create visual content, solve coding problems, and communicate professionally. It also increased my awareness of cyber safety and responsible online behavior. Each task contributed to improving my knowledge and practical skills. Overall, this project has prepared me to use technology more effectively in my academic and personal life.
